Challenge

Microsoft Azure provides a robust platform for you to create and deploy applications without having to maintain your own infrastructure. However, as referenced in the Microsoft Shared Responsibility Model, your applications and data still remain your responsibility to secure and protect.

Veeam® Backup *for Microsoft Azure* delivers native, policy-based protection for reliable recovery from accidental deletion, ransomware, and other data loss scenarios. An API-first approach, secure backups, and fill-and file-level restore ensure resilient protection that's easy and cost- optimized, freeing up time and resources for strategic IT priorities.

Hybrid- and Multi-cloud Veeam users experience:

$1.1M average annual cost savings

+61% security cost efficiency gains

7x faster recovery for cloud workloads

Key Capabilities:

Relentless Security

- **Logical air-gaps:** Isolated backups separate protected data from production data
- **Secure access:** Least-privilege IAM and role-based access control (RBAC)
- **Immutable:** Leverage immutable storage in Azure Blob to store data in a WORM state

Fast, Reliable Recovery

- **Recover anywhere:** Across subscriptions, regions or outside of Azure*
- **Full- and file-level:** Full instance or granular recovery, in-place or as new
- **Simplified recovery:** Wizard-driven, automated and self-service workflows

Cloud Efficiency

- **Cost-optimized:** Backup lifecycling to object storage with cost calculations
- **Hybrid ready:** Operationally consistent management across the hybrid- and multi-cloud
- **Policy based:** Automated detection and protection with native backups

Latest Release

- **CosmosDB Backup:** Orchestrated, native snapshots and restore of CosmosDB, plus fully customizable backups for PostgreSQL that entitle full control over backup intervals and retention
